

THREE PRETRAINING OBJECTIVES

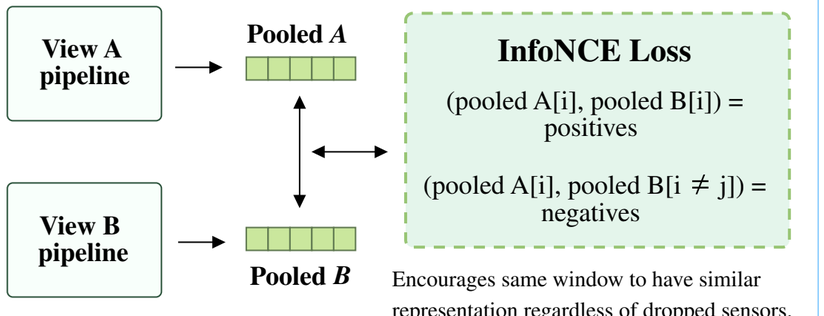

(1) STRUCTURED SENSOR DROPOUT (acts BEFORE tokenization)

Drop rules (independently per view)

- Drop whole modality with p = 0.25
- Drop whole location with p = 0.25
- Drop a single channel with p = 0.20

(2) CROSS-CONFIGURATION CONSISTENCY (acts on pooled outputs)

Encourages same window to have similar representation regardless of dropped sensors.

(3) MASKED SENSOR MODELING (acts INSIDE View B's encoder pass)
